

Project:

## TeraBrite - Video Room

View:

Top View - walls  
"folded out"

Scale:

1/8" = 1'

Suggested Auralex Products:

- One (1) Project 2 Roominator Kit  
Kit Includes:  
(8) LENRD Bass Traps  
(24) 2x2x2" Studiofoam Wedges  
Mounting Adhesive  
Four (4) T'Fusor 3D Sound Diffusors
- (2) Pairs of ProMAX Portable Treatment Panels  
(3 Total Pairs to Share with Mix Room)

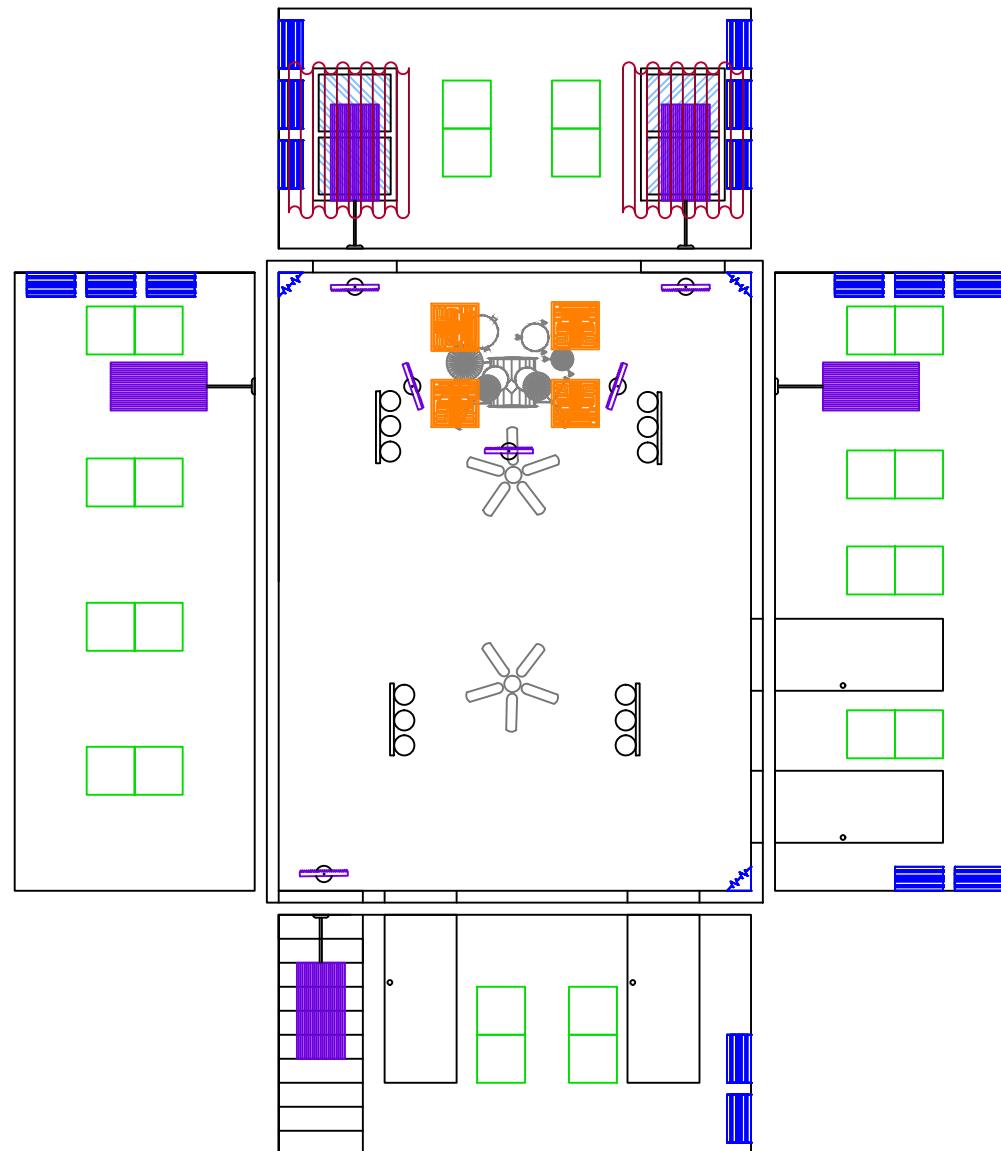

1. Place the [LENRD Bass Traps](#) in the vertical and horizontal corners as shown to help control low frequency build up. Spacing the LENRD's out 3-6" will provide additional absorption with exposed edges.

2. Space the [Studiofoam Wedges](#) evenly over the walls and ceiling as shown, and they should help control overall reverberation and Axial Modes.

3. Cover the [windows](#) in the room with [thick, Theater Style Curtains](#). Be sure to hang enough fabric so that the curtains have deep folds when drawn to absorb unwanted reflections.

4. In the event of HVAC, Lighting Fixtures, etc. that will hinder product placement, adjust panel orientation to fit or carefully cut the Studiofoam with an electric carving knife.

The treatment shown to the right can help to improve the sound quality inside the room. For additional tips on sound isolation, visit [www.acoustics101.com](http://www.acoustics101.com).
